

*Facts About*

## Recycling

One of the major environmental concerns is improper disposal of waste tires. Illegal tire dumps provide breeding grounds for mosquitoes which can transmit disease to humans, livestock, domesticated animals, etc. Tire pile fires can be an even greater environmental hazard.

Today, approximately eighty percent of waste tires are recycled in some way, thanks to a growing need for the material that waste tires can provide and efficient means of disposing of waste tires.

Transporters who offer to take waste tires at prices too good to be true could be dumping tires illegally. Significant penalties can be levied against a transporter or retailer for dumping waste tires illegally.

## About ATR

Advanced Tire Recycling has been in business since 1990. The first vehicle was a Chevy S-10 pickup truck, two accounts, and a backyard in the suburbs of Trenton, Florida. The past sixteen years has seen the business grow to 60 accounts utilizing two semi trucks with eighty 45-foot trailers, and three 26' straight trucks.

The business moved from the back yard to a 47,000 square foot facility located on 15 acres in Gilchrist county Florida and is now approaching 1 million scrap tires recycled annually. The waste tires picked up with our r4oute trucks are unloaded at the facility and graded. About 30% of these are still serviceable and are sold to used tire stores, utility trailer manufacturers, and even taxi companies. The tires are taken in the 45' trailers directly to the shredder to make crumb rubber or used as an auxiliary source of power at manufacturing facilities.

## Our Customers

Our customers consist of national tire companies, national tire disposal companies, manufacturers, local tire stores and even individuals with a few tires to dispose of. Our used tires are graded into tread depth and sold accordingly.

Our inventory ranges anywhere from 40,000 to 50,000 tires a any one time, depending on the season. We ship tires all over the southeast by trailer and ship overseas to the Caribbean and Central America by container.

## Our Services

Although we offer convenient pickup of waste tires with our fleet of route trucks, the most cost-efficient manner is our trailer drop program where we will spot a 45' trailer on the customer's business site.

*Our drivers will pick-up your waste tires between 24—48 hours of your call.*

A 45' trailer will hold between 1200 and 1400 tires depending on size and efficiency of loading -- "the tighter you pack 'em, the cheaper it is!"

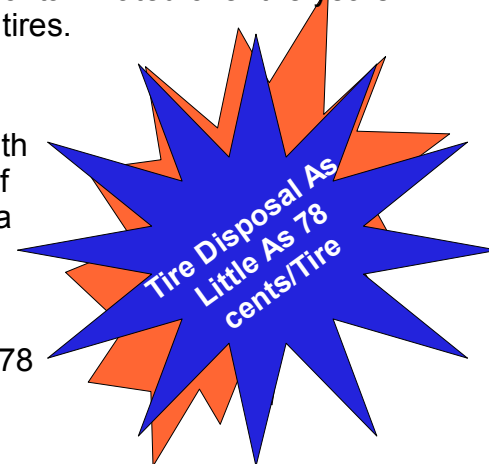

Some customers have converted to the trailer drop program and have cut their tire disposal expense by almost half. We are presently working on a land clean-up program.

*Plenty of trailers to meet your tire disposal needs with our trailer-drop program.*

In this program, we will offer our customers a clean-up of property that has been contaminated over the years with waste tires.

We are licensed with the State of Florida as a waste tire collector, license number 0378
